## Preflight project - database

Github Repo

2

# Prerequisite

- Docker
  - Docker desktop
- Database management tools
  - Dbeaver

#### **Database choices**

- Relatonal database (Comparison)
  - PostgreSQL
  - MariaDB / MySQL
  - SQLite
- NoSQL
  - Types
  - Vendors

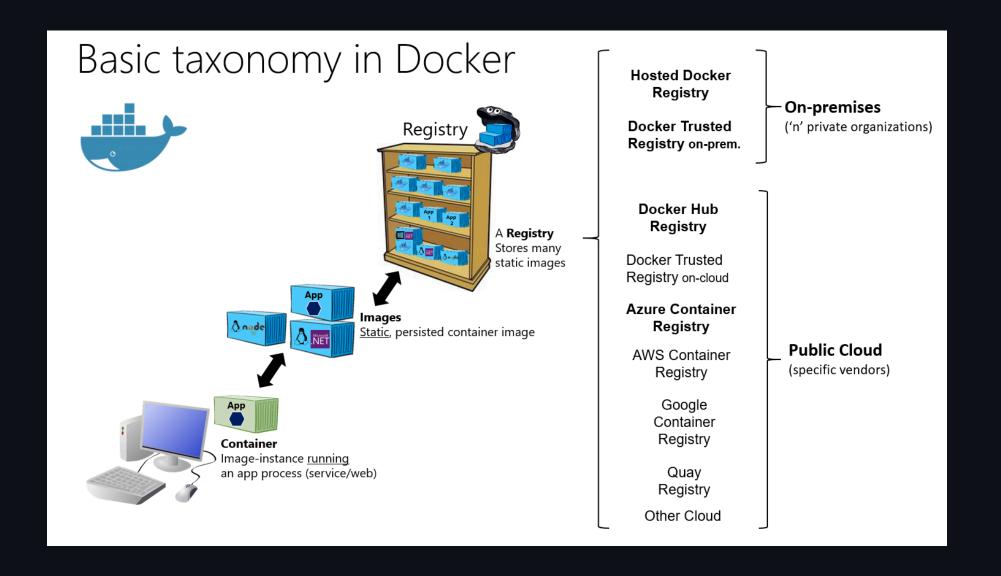

## **Docker 101**

#### **Containers**

- Containers provide a way of creating an isolated environment in which applications and their dependencies can live.
- Why?
  - Portability (save container to registry or even USB)
  - Consistency (works everywhere)
  - Easy deployment (can test on local machine)

### **Docker**

- A containerization platform
  - Leading player
- Alternative Podman

8

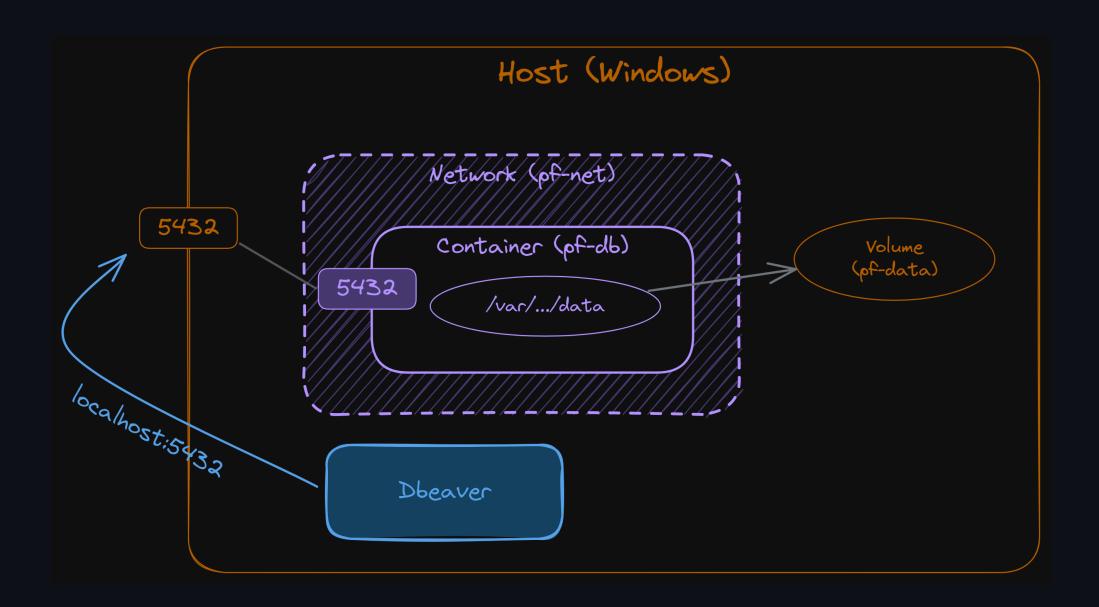

### Should you run database on docker container?

It depends.

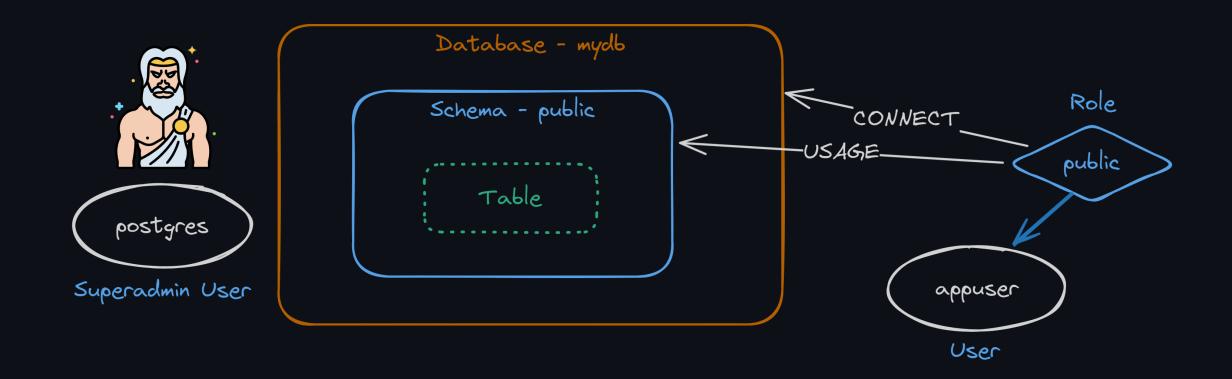

## Spinning up database instance

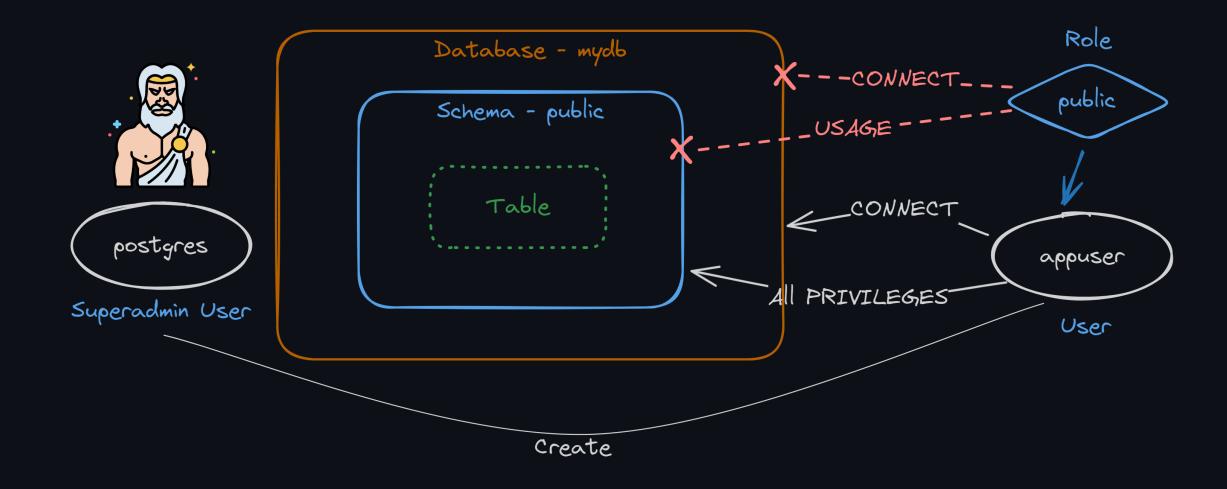

Files

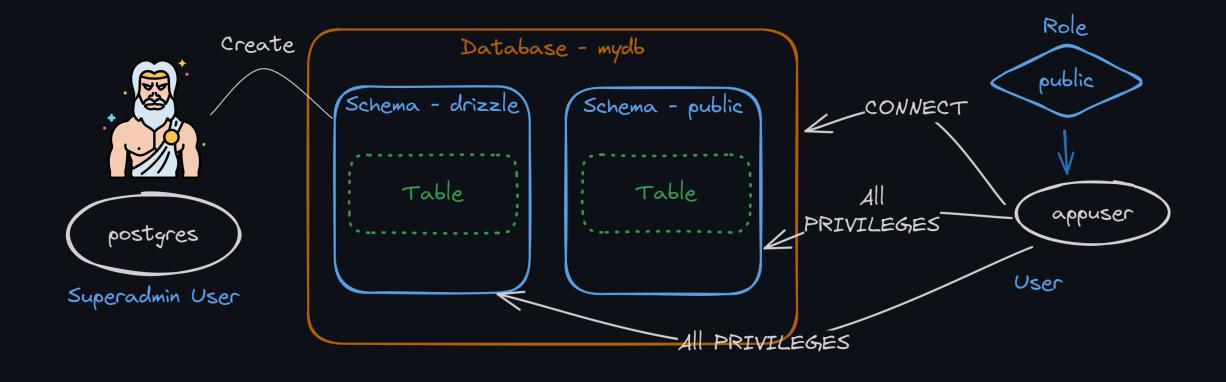

- 🖁 ./.env Copy from here.
- ☐ ./.gitignore (link)
- ☐ ./docker-compose.yml (link)
- docker compose up -d

## Database user management

### **DB** user management

- docker exec -it pf-db bash
- psql -U postgres -d mydb
  - Note that you do not need to input password here due to how the image is setup. (See section in POSTGRES\_PASSWORD)

• Don't forget to change the password for appuser.

```
REVOKE CONNECT ON DATABASE mydb FROM public;
REVOKE ALL ON SCHEMA public FROM PUBLIC;
CREATE USER appuser WITH PASSWORD '1234';
CREATE SCHEMA drizzle;
GRANT ALL ON DATABASE mydb TO appuser;
GRANT ALL ON SCHEMA public TO appuser;
GRANT ALL ON SCHEMA drizzle TO appuser;
```

## Note on psql

- \1 to list all databases
- \du to list users
- \dn to list schema
- \dt to list tables
- \c to view connected database or change to another db.
- \q to quit

18

#### ORM

- Object Relational Mapper
- A piece of software designed to translate between the data representations used by databases and those used in programming (in our case, Typescript).

### Why ORM?

- Get type information when interacting with database.
- Write schema file
  - Good for documentation
- Nice Tooling
  - Database synchronization
  - Schema generation from existing database
  - Database viewer
  - Migration tool

## Should you use ORM?

It depends.

261497: Fullstack Development

21

## JavaScript / TypeScript ORM

• List

### **Setting up Drizzle**

- npm init -y
- npm i drizzle-orm postgres dotenv
- npm i -D drizzle-kit
- npm i typescript ts-node tsconfig-paths

### **Typescript**

```
• npx tsc --init
```

• Add this in ./tsconfig.json

```
"ts-node": {
  "require": ["tsconfig-paths/register"]
"compilerOptions": {
 // ...
  "baseUrl": "./",
  "paths": {
   "@db/*": ["./db/*"]
```

24

#### **Database initialization**

- Files
  - ☐ ./db/utils.ts (Link)
  - ☐ ./db/schema.ts (Link)
  - ☐ ./drizzle.config.ts (Link)
- mpx drizzle-kit push

## Migration

- 🖁 ./db/migrate.ts (Link)
- mpx drizzle-kit generate
- npx ts-node ./db/migrate.ts

#### **CRUD**

- 🖥 ./db/client.ts (Link)
- ./db/prototype.ts (Link)
- npx ts-node ./db/prototype.ts

### Script

To save yourself some typing, add this in package.json

```
{
    // ...
    "scripts": {
        "db:generate": "drizzle-kit generate",
        "db:push": "drizzle-kit push",
        "db:migrate": "ts-node ./db/migrate.ts",
        "db:prototype": "ts-node ./db/prototype.ts"
    }
}
```
